USING DIGITAL TECHNOLOGY IN THE CLASSROOM

Course summary

Digital technology has become an integral part of our lives, and today's teacher needs to keep abreast with the continuous developments to ensure effective implementation in the classroom. This course aims to keep you up-to-date with the current eLearning/mLearning trends and to exploit the potential of students' own devices to the best educational effect. Through practical, hands-on sessions you will learn how to create interactive lessons using the basic features of online tools and apps. We will evaluate the validity of these tools and discuss benefits and potential pitfalls, whether in a primary or a secondary school environment.

Flipped Classrooms

In a flipped classroom, the traditional structure of a classroom is reversed. Instead of teachers delivering new content during class time and assigning homework for practice, students are introduced to new concepts or material outside of class and class time is dedicated to applying and reinforcing that knowledge through collaborative activities, discussions, and problem-solving.
